

# Centurion RotoGate

## Key Benefits

- **Highly Cost Effective**
- **Reliable Motorised Gate**
- **180° Opening**
- **Stainless Steel Finish**
- **Choice of sensors for auto opening**
- **Free opening on power fail**
- **Integrates with most Ticketing and Access Control Systems**
- **Applications**  
Retail, Schools, Museums, Leisure Clubs, Cafeterias, Manufacturing Plants, Offices, Attractions and Transport Facilities

## The Centurion RotoGate

The RotoGate is a cost-effective and stable entrance gate which is ideal for entrances with high volumes of customer traffic. The Rotogate can be fitted with a number of alternative opening controls – from manual push-button to a traditional photocell, to sophisticated fully automatic radar systems.

All mechanisms and control systems are neatly located inside the gatepost and are easily accessible when servicing is required. The Rotogate has a unique “plug and play” feature with all of it’s controls.

The Rotogate gate has a standard break-out with alarm and automatic reset. If the gate is forced open and the break-out function is released, the gate arm will automatically return to its original position after approximately three seconds. If the gate is fitted with an opaque white cover you can choose to have a flashing or steady light and/or activate and an audible alarm.

The resistance of the break-out torque on all our RotoGates can be adjusted very simply between 60-180 Nm. The opening force of the arm is limited to 8Nm, corresponding to only 1 kg of opening force.
