

Connect All Your Business Applications and Data Sources With API

Managing an attraction in the digital era requires the consistent flow of data to and from your management system with other business applications and data sources. Centaman offers a fully functioning read/write API, allowing for integrations and customizations. Create powerful, personalized, convenient online engagements and seamless cross-channel experiences.

API Built For Attractions

API With Out-Of-The-Box Integrations

Through years of experience providing attraction management software, we know which applications you are likely to use – and which provide the most value. Common integrations can be configured “out-of-the-box” with minimal technical resources and a seamless, tested solution.

API for Custom Integrations

Share data between our software and any other business application or system you use via API. Our system consumes and updates data automatically, increasing efficiency and reducing human error. External applications can synchronize customer data with read, write, and update features.

Developer Hub & Support

Our Developer Hub (powered by ReadMe) gives developers all the tools they need to build applications and projects integrated with Centaman. We also offer Developer Support and project management assistance. Don't have developers? Leverage the Centaman development team.

Common Out-Of-The-Box Integrations

- Donor management to CRM platforms
- Revenue management solutions for dynamic pricing
- Online travel agent (OTA) bookings
- Turnstiles and access control
- Game and ride systems
- Digital signage and wayfinding applications
- Weather forecasts for reporting integration
- Third-party mobile applications
- Accounting and finance integrations
